

FutureDial's Network Device Secure Eraser™ (NDSE™) Solution Earns Covered ADISA Certification for Simultaneous Data Erasure of Network Equipment

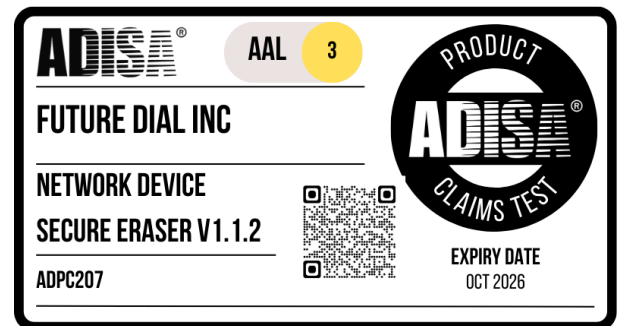

The NDSE™ solution, certified to ADISA Level 3, clears the path for network equipment data security, setting the gold standard in data sanitization for routers, switches and other network equipment

SUNNYVALE, CA – Oct 13, 2023 — [FutureDial Incorporated](#) the leading provider of mobile device processing solutions for Wireless Carriers, Mobile Device Buy-Back Trade-In companies, Third-Party Logistics Providers (3PL) and network equipment suppliers, proudly announces the successful independent validation of its Network Device Secure Eraser™ (NDSE™) solution through the Asset Disposal & Information Security Alliance (ADISA) Claims Test Process on Oct 10, 2023. The NDSE™ solution is certified to ADISA Level 3.

ADISA's certification program is globally recognized as a hallmark of quality for companies engaged in asset recovery services, logistics, repair centers, and IT asset disposal. This certification assures that data sanitization products meet the highest industry standards and adhere to best practices for handling data-carrying assets.

FutureDial's portable NDSE™ solution, capable of simultaneous data erasure processing for up to 40 multiple routers, network switches, and other network devices per processing workstation, was submitted to ADISA testing to validate its ability to simultaneously erase data from various network devices, including routers and switches. NDSE™ underwent rigorous testing and verification by ADISA, verifying and certifying at ADISA Assurance Level 3 for its ability to erase data beyond forensic recovery. This enables such refurbished data-wiped network equipment to be resold by providers in secondary markets.

NDSE™ is specifically designed for companies involved in the refurbishment of preowned network routers and switches, offering a competitive advantage through processing automation. Automation streamlines the refurbishing process, reducing time and costs while enabling quicker delivery of refurbished equipment to customers. By automating processes with NDSE™, the potential for errors is minimized, and equipment quality is improved, setting companies apart from competitors and enhancing customer satisfaction.

"Being certified to ADISA Level 3 underscores the unwavering trust our customers have placed in our services over the years. Our certified Network Device Secure Eraser™ (NDSE™) solution signifies a pivotal step forward in data security," noted Frank Harbist, President and CEO of FutureDial. "It's not just about wiping computers and mobile devices clean; it's about safeguarding every facet of network security. In today's digital landscape, where routers, switches, and other network equipment house sensitive information, we provide a portable, efficient, one-touch data erasure solution."

FutureDial is renowned for its ability to deliver industry-grade solutions that streamline processes and automate tasks while centralizing workflows. This empowers businesses to improve operational efficiency, increase profitability, and meet the stringent standards and audit requirements of their respective industries. The introduction of the NDSE solution marks a significant enhancement to FutureDial's distinguished product lineup, which is well-known for its cutting-edge processing automation and data management solutions. The NDSE solution seamlessly integrates with the company's existing suite of state-of-the-art processing solutions tailored specifically for the reverse logistics supply chain and enterprise-tier networking equipment management.
